

We are excited to announce that MongoDB and Exafluence, a Strategic SI partner, have launched a FHIR solution ready for Healthcare customer's adoption. FHIR allows healthcare information, including clinical and administrative data, to be available securely to those who have a need to access it, and to those who have the right to do so for the benefit of a patient receiving care.

MongoDB's Document Model is the perfect data platform to power your FHIR project. Our API solution includes support for custom field attributes and second-tier and cloud object stores to support both batch and real-time integration. Our joint solution also leverages Confluent Kafka & Spark and is available both on-prem or on any public cloud.

With the MongoDB FHIR API solution, electronic health record interoperability is easy especially since we support leading Healthcare systems like Epic, Cerner Health and Allscripts.
